SEND CUTTERS IN EARLY TO AVOID THE SPRING RUSH

Send your cutters directly to the factory:
201 SW 33rd Street
Fort Lauderdale, FL 33315
Tel: (954) 463-2707
Fax: (954) 525-0239
Toll Free: 1-800-824-5372
SERVICE REQUIREMENTS FOR SPURS LINE & NET CUTTERS

Perform a check to determine if bearing replacement is necessary!

Tightly squeeze cutter blades together.

Fig. 1: When the blades do not touch and light can be seen between them, it indicates that the bearings have not worn completely. A clearance of approximately 0.010” between blades the assures that bearing replacement is not necessary.

Fig. 2: When blades touch (metal to metal), it indicates that the bearings have worn and must be replaced.

To Prevent Electrolysis, the Stationary Cutter Must Have a Zinc Anode Attached as Shown Below.

Electrolysis Prevention for Spurs Stationary Cutter Assembly Only

Spurs stationary cutter parts are electrically isolated by the bearing material and sound damping urethane plugs. Therefore, these parts must be protected by our specially designed zinc anodes. The zinc anode is fit to the stationary cutter blade to protect it from electrolysis. We have zinc anodes available for every Spurs model at all times and they can be purchased directly from our factory or through your local dealer.

Urethane Plug Replacement:
Insert plugs into the holes in the stationary blade
